The PSR-800. It looks like the PSR-700 or Radio Shack Pro-107

I don't know why the ban scanners from having the cell freqs in them,they are all scrambled anyway so what
are they worrying about,maybe there is a way to descramble the cell freqs and they are worried about it,all
it is ..is a rush on there as I have a vr-5000 and a old yaesu 9600 and they tell me what is going on,so
does anyone know why they ban or stop scanners from being made with 815 to 856 or whatever,its not apcop25
technology on the phones so what what is the system they use on cellphones anyone know?I would buy my 996's
etc from europe if i knew they would be wide open over there like my yaesu vr-5000 was.and heck they even
stated that vr-5000s cant have the cell bands in them,well the vr5000 cant decode cellfreqs anyway so whats
the problemo

The mode used is FM and it can be easily monitored by any FM receiver
that covers the range. It is not scrambled in any way.

The ban was applied because cell phone companies bought a law rather
than advising its customers they could be monitored.

The intent is to block reception of analog phones.
One day when the US catches up with the rest of the world and does
away with analog the law can be rescinded.

Understand that there are no sanity tests required to get a license.
The guy is lucky that is all he got for a penalty.

I am looking to buy equivalent scanner for this part only. I do not have the power supply that was offered at the time I purchased the scanner either. Yep
Good Ol Newt Gingrich
Had a call recorded and released
been a loooong time since that news broke, must have been the early mid 90s
just Google that name and scanner and cell phone

the story is all there

story ends with 'Ol Newt and another mate claiming that scanner owners
were "Electronic Stalkers" and pushed for a bill to ban their use or
have the freqs blocked, Cell phone companies added their support

Gotta love a country that claims to be "The Land Of The Free" but have
less freedoms than countries they want to give Freedom to

Where do you come up with this shit?
This township law you refer says I can't drive my 1955 Chevy because the
township consider it to be junk? Even though the state has issued a proper
license state and is well maintained?

Have you ever considered challenging these HOA's assholes in court?
As well as the township?

Did you not state once this was in Arizona?
I looked up the law on Arizona HOAs and that law clearly states, the HOAs
do not have any legal authority concerning vehicles on a dedicated street.
Dedicated, has a wide meaning. The only way an HOA could have total control
of a street is to declare it "private".

What you need to do is take action. Get off your lazy armchair ass and get
involved with the HOA. My brother did and how he's even on the board.

FYI, if there is a federal law on the subject, the federal law takes
precedence over any other jurisdiction law. So no, the township can not
restrict a ham radio operators license in any manner.

I wish the Gov't would pay me to sit on my ass all day and think of
dumb shit to type in to my computer and post to see what folks with
a life will type in to reply to his Gov't financed drivel.

Tip Of The Day:
Never reply to any newsgripe post that starts with "X-No-Archive: Yes".
It's a sure sign of a troll that doesn't want to archived so you can't
prove it's them in a few years. Of course, they better keep copies of it
so they can repost it years later and save having to rethink about it.

A lot of this stuff looks like a guy named Randy in other places. Very
similar types of writing...

so according to you, a police department can just decide to use the 27
mhz c channel 14 for all their communications and when some traveller
comes along , hears nothing and calls out eaker reaker 14 to his
friend, the police can claim ge interference and arrest him forr
interfereing with them since it is "unintentional interference"
ecause your state law says so even though the FCC says it is open to
ALL citizens of the U.S. and will NOT be assigned to any one
individual o one group?

where does your state get off superceding FEDERAL laws???

your police department wold sure have a field day setting up their
regular police operations on 27 mhz CB channel 19 ans arresting all
the truckers and other highway travelles who decide to transmit on
their "exclusive police frequency"' of CB channel 19 even though the
police werent talking at the time since it is "interfering with them"
to do so since they decided to use CB channel 19 as their main police
channel 24/7.

well, if they can afford it, someone is going to get sued if the FCC
yanks their license for simply possessing a radio which the FCC itself
said is perfectly legal for anyone to have.

when they did not make any illegal transmissions on any frequency at
all

when the cops confiscate it simply because it is capable of
transmitting on the police fequency which is either a ham radio
frequency in most of the nation or a CB frequeency in the entire
nation.

Only for dickheads who stick the monitor to the middle of their windscreen in front of their face thus blocking their vision forward, which would be the direction they most travel in

In Australia is has been law for many many years that you can't put anything on your windscreen that blocks your forward vision, yet Navigation units and reverse cams are all the rage, because you can place them down at dash level and they don't block your vision instead of the middle of the screen so you can show off to others that you have such things and making you look like a complete Dick..... Where do you come up with all this CRAP????

There is NO provision in CFR 47 Part 95 SubPart D for ANY local Police
Fire or other Public Safety Outfit to commandeer any authorized
Frequency for their specific use. Therefor your premise is BOGUS from
the get-go.. Any local LEO who tries to enforce, such a contingency,
will find him/her self in a serious confrontation with the local FCC
Office when it becomes know, and the local US Attorney soon there after.
I have known local Podunk Sheriffs, to be locked up in their own jails,
by a US Marshal, for tangling with FCC field Agents, about such
violations of CFR 47.

Sonny, you need to go back and reread CFR 47 Part 95 AGAIN.
the frequency above in NOT a CB (Citizens Band Radio Service) Frequency,
PERIOD. It is a MURS (Multi-Use Radio Service) Frequency, and th two are

To bring clarity to this thread with facts:
1.) A Law Enforcement Agency is a Business Entity (Under Catagory of
Public Safety). They have to operate on their ASSIGNED FREQUENCY /
FREQUENCIES.
2.) The FCC, LONG AGO dis-banded the ragulation of the "Citizens Band"
or CB radio service. The regulation of such is left up to local law

enforcement i.e. "City of Montgomery, AL vs Marc Parker". The FCC does not care, UNLESS you are running so much power it is interfering directly or by harmonic / IF means with Miltitary, Federal Government (goes for licensed hams also such as FBI vs Alabama Intercity Ham Link), or other vital communications as deamed by the Director / Assistant Director / Local Field Office Director.
3.) You may send a FOIA letter to the FCC if you do not believe one word of this, but what you get back if you don't believe me, will just back up the fact you are full of S#!t.
4.) How do I know? I spent several years in Government and as a Communications Commander for a Local Public Safety Entity in Florida. And I have been a Ham since 1999, and stay well versed on rules and regulations due to my proximity to several major USN and USAF bases (7 within 25 miles).

Well, Not exactly, CFR 47 Part 95 SubPart D, is still the Law of the
Land, and just because the FCC doesn't spend much time dealing with
these stations, does NOT mean that there are NOT any Rules covering this
Radio Service. What the FCC did was to cover all Radio Stations in this
Service with a Blanket License, that is Nation-wide for any US Citizen.
This is the same type of License, they use for the FRS and MURS Radio
Services. The Rules covering EACH of these Radio Services are in CFR 47
Part 95, for anyone to read, should they actually take the time, and
this is where the Commission sets out the Frequencies, Emissions and
Power Levels, ALLOWED for use in each of these Radio services. There is
no such thing as a "Local Field Office Director"

There are EICs (Engineer in Charge) over each Field Office, or a
Resident Field Agent, for the smaller Offices. Their boss is the
Regional Director for their FCC Region, and he Reports to HQ.

You may ask how I know all this? Well, it is really simple, I am
a reTired FCC Resident Field Agent, and have many associates, and
friends, still in, and working, for the Commission.

I have a Regency R1080 scanner. It scans good, it programs good, but
when it stops on a station you can not hardly understand the audio, I
have replaced the output audio IC chip LM386 and all of the capacitors
around it, plus the speaker. That made no difference. It seems worse on
UHF, where all you can hear is the carrier and the audio seems non
existant, but on the wx channels you can hear audio, but almost so
distored as unable to understand.
I would sincerly apprecte any thoughts that you may have. Thank you....

Is that a misprint? I'll stick with my BCT-8. Cops here are too broke to

You did all that work and yet you don't know how to use spell check?

Maybe the scanner is junk and needs to be replaced.
How old is this scanner?
internet says it was made in the late 80's...

I’m just fishing for some honest opinions here before I drop $500 on a new scanner. I recently sold an unblocked AOL MKIII I bought in 2004, because it became basically useless for the purpose of full coverage scanning. I never lost my fascination for the hobby, so I’m considering a Home Patrol (or a Pro-106) to at least enjoy the trunk tracking capability it didn‘t have.

The problem for me is that with all this encrypting going on, is it really worth the money? I mean how much longer can I take advantage of casual eavesdropping before I end up with an expensive paper weight I can‘t use for anything else? That’s why I’d appreciate your take on it.

Thank You.

I bought one about a month ago based on the recommendation of a friend who has long been into scanners. I love it. I live in SW Connecticut and the range is amazing. I get Long Island, NYC, up near West Point, well into Connecticut and NY State. The only department I'm aware of that is encrypted is my own home city's police department. But all the surrouding PD's are clear, as are fire and EMS. Even the Connecticut State Police are broadcast in the clear. This is the best money I've soent on a "toy" in a long time. My only complaint is that even though I live in area close to three major airports, there's not a lot of aircraft frequencies in the databas. That's something I hope will be corrected with updates in the future. The only change I've made on the Home Patrol is I switched out the antenna that came with it to a Watson WSMA-801, which was another recommendation from my friend. It's about an inch longer and the reception is great. One thing I did that I'm glad I did is that the sound coming out of the HP isn't all that great, but it has a line out plug, so I plugged it into my computer speakers and WHOA! it's like sitting in dispatch it's so loud and clear. The only screwy thing is that the line out on the scanner takes a 2.5mm plug and my line in is 3.5mm. I couldn't find one locally so I hit up eBay and found them cheap and qith free and quick shipping. I can't recommend this little scanner enough. I'm glad I bought mine.

Just so happens I was born and raised in Connecticut myself, but
reside in Oklahoma now. Your favorable review mirrors many of the ones
I've read so far for this rig. People are loving it for the most part,
although there are those who think it's way over-priced and generally
resist the idea of auto-programming scanners. My problem is this
encryption nonsense putting the thrill out of commission. I suspect it
won't be an issue with city police activities in my area for some time
to come, but how much longer can I count on that when the local EMT
company has already taken the plunge? I realize no one can answer that
except myself after I've made the purchase, but that's why I'm
ambivalent about dropping $500 to find out. I understand that GRE is
poised to release its own auto-program handheld for about the same
price at the end of this month, but again, it still boils down to
taking a big risk on ending up with an expensive paper weight and
that's what's bothering me.

After all, I had a beautiful unblocked MK3 I paid over $600 for that
was rendered pretty much useless for anything other than listening to
HAM operators, TV broadcasts, broken police transmissions and local
two-way radios, and consider myself mighty lucky to have sold it for
$250. Thanks for your reply.

After all, the best activity is encrypted anyway, and I can think of better things to do with $500.

In Australia at the present there are still some police using analog,
and there are still many less interesting services such as buses and
some taxis using analog.
Also aircraft and CB radio.

Federal law says possession of marijuana is illegal, except in california.

Mixed Decision from the California Court of Appeals in Palmdale,
California Antenna Case
TAGS: court of appeals
02/08/2011

On January 27, 2011, the California Court of Appeals, Second Appellate District, issued its Opinion in the antenna case of Alec Zubarau, WB6X. In several respects, it is a win for Amateur Radio in California. Working with his ARRL Volunteer Counsel, Len Shaffer, WA6QHD, Mr Zubarau is now considering their next course of action.

The Court found that the Palmdale antenna ordinance, as it pertained to the height limit for vertical antennas, was “unenforceable” because it allowed a radio amateur to have a vertical antenna up to 75 feet high when measured from the ground but limited the “active element of the antenna array” to 30 feet. The ordinance did not define “array” or “active element” and did not specify from where the 30 permitted feet for such “array” was to be measured. The Court found that if even one reasonable interpretation of the ordinance could be found, the ordinance could be upheld, but that in this case, no one could understand what the limitations were and how they could be applied. That portion of the City’s ordinance was therefore unconstitutional and unenforceable.

The Court also held that the ordinance was unenforceable to the extent that it attempted to regulate radio frequency interference. The City maintained that it could regulate RFI, but the Court, citing case law

and argument in ARRL Amicus Curiae brief, held that only the FCC could regulate RFI. Any State or municipal law that attempts to regulate RFI is preempted.

Of some concern to Len Shaffer, however, is that the Court held that Palmdale properly ordered Zubarau to remove his permitted 55-foot crankup tower. The Court opined that the small, VHF/UHF vertical on the roof constituted “reasonable accommodation” under PRB-1 and California PRB-1 statute (California Government Code Section 65850.3). The Court said that leaving Zubarau with a VHF/UHF antenna constituted a reasonable accommodation because it allowed him to be active in some part of Amateur Radio. There was no analysis of the “minimum practicable regulation” test in PRB-1 and the California statute, so that part of the three-prong PRB-1 test was left unexamined. Because the Court reversed the trial court on this finding, Zubarau had no longer clearly “substantially prevailed” in this case and so the Court remanded the case to the trial judge to re-examine the issue of attorney’s fees claimed by Zubarau.

The Court’s application of the “reasonable accommodation” standard of PRB-1 in this case is, in the view of Len Shaffer and ARRL, both unique and very narrow. Said ARRL General Counsel Chris Imlay, W3KD:

“While this decision is positive for Amateur Radio in California in two significant respects, the record in this case shows that the small, roof-mounted VHF/UHF antenna at WB6X was insufficient to conduct any international communications. Alec’s tower is necessary in order to conduct international communications and to permit even a 50/50 chance of contacting Alec’s native Belarus on any given day. The Court ignored this evidence and it did not apply the “reasonable accommodation” test articulated by FCC and in prior case law, and it did not apply PRB-1’s “least practicable restriction” test at all. In essence, the Court applied a balancing test which FCC and several Federal courts have said is improper in conducting the PRB-1 analysis. It is not true that any accommodation for a radio amateur is reasonable accommodation, and it is not sufficient to simply permit a radio amateur “some participation” in our avocation. Instead, PRB-1 permits effective, reliable Amateur communications. It is hoped that the Court will revisit this portion of its otherwise favorable decision and get it right the second time.”

The court made three decisions that affect amateurs in California. First the court found that part of the Palmdale ordinance was unconstitutional because it was vague and could not be understood by a reasonable person. That part of the ordinance allowed an Amateur to have a vertical antenna up to 75 feet high when measured from the ground but limited the “active element of the antenna array” to 30 feet in height. The court found that the ordinance did not define “array” or “active element” and did not say where the height of such array was measured from. After a number of questions were submitted regarding this ordinance, the court determined that no one could

really understand what it meant and declared it unconstitutional. This part of the decision, said ARRL Volunteer Counsel Shaffer, will affect only hams living in Palmdale.

The next issue decided by the court had to do with radio frequency interference. They said that only the Federal government could regulate RFI and any state or municipal law that tried to address it was preempted. That means it is not enforceable. That part of the decision affects hams throughout the state, according to Shaffer. He asks any California amateur whose municipality or county has an ordinance that limits Amateur Radio antennas or operations based on whether there is interference to consumer or other devices to contact Southwestern Division Vice Director Marty Woll, N6VI, at n6vi@arrl.org.

The final part of the decision had to do with whether Palmdale followed the law when they made Alec Zubarau take down his permitted tower but allowed him to keep a VHF/UHF vertical on his roof. The court said they thought this was a reasonable accommodation because it allowed him to be active in some part of Amateur Radio. “This decision is troubling,” said Shaffer, “and we are considering what options we may have regarding any further review of the issue. We will be conferring with various legal sources before any final determination is made.”

I have a radio shack pro-96 5500 channel scanner. It worked fine for a couple years. I plugged it in one day and listened for about 10 minutes and noticed it was quiet. Nothing on the display, no power to the unit. Ive tried new cord, batteries, etc. Any help.

Have you checked to see if its still programmed?
Did you by chance use the wrong battery box ? using the wrong carrier
with the wrong batteries can create a real problem.. corrosion ETC:

IIRC
If the batteries run down on the Pro-96, it loses its ability to do
anything. no squelch no noise - NaDa...

IF its not the problem, take to Rat shack and have them send it for
repair,

the Pro-96 is a digital and while its not the best, its well worth keeping

IF you have a real need for a scanner anyway.. a new digital scanner is
not cheap.

87. programming SmartZone system into Uniden BCD396XT ?

[posting for a friend who lacks Usenet access]

Hi,

I have a few questions re: setting up and monitoring a Motorola digital trunked radio systems on a Uniden BCD396XT.

Of particular interest is the Kennedy Space Center system. We are planning to head down for the last few shuttle launches, and wanted to be able to set the radio up ahead of time.

The first time we went down for the shuttle rollout, I had the system programmed as a P25 system, While you could hear the data when in "hold" mode (both control channel and fother data traffic), but never heard any voice traffic. The screen displayed "ID Search", but no audio.

I've been told that I need to program this system in as a Motorola Type 2 SmartZone, rather than a P25 system. So, I have re-programmed the system. I'm a little bit out of range from here to test this ahead of time, but would like to make sure it's programmed right before we go.

Was hoping someone out there who has had success receiving this system (or one like it) could give me a hand verifying that I have things programmed correctly.

Here are my questions re: programming this system into the BCD396XT:

1. ID Search/Scan: which one should I select, 'search' or 'scan'?
(what is the difference between these two settings?)

2. What (if anything) do I need to enter into the "Fleet Map"?
It's currently set to "Custom".

3. Priority ID Scan is set to Off by default, is this correct for receiving this system?

4. I read that you need to set the status bit to 'Yes' for the KSC system. is this correct?

5. Set End Code: Should this be set to 'Analog+Digital' for the KSC system?
(it is set to 'Analog' by default)

6. Audio AGC: should this be set to 'Digital' for the KSC system?
(it is set to 'Analog' by default)

7. Under Enter Band Plan -> Custom -> Offset -> Polarity, i have the offset as 380 to match the values listed on several websites.
Do I leave the Polarity setting set to "+ Polarity"?

8. "Set Modulation" defaults to "Auto", can I leave this as is, or
do I need to specify NFM or FM mode?

9. As for the talkgroup tables, will the radio populate those from
the control channels, or do I need to enter them manually?

10. The RR site lists "System ID: 0A08" and "Connect Tone: 105.88".
Not sure if I need these or where they would go.

My sources for the system and frequency info are:

http://www.radioreference.com/apps/db/?sid=808
http://home.roadrunner.com/~scanner/military.htm

I think that covers the programming questions. If you can think of
anything that I missed, or have other helpful hints on programming and
scanning this type of system, your help will be greatly appreciated.

Here is the specific system information as programmed into the radio:

Edit Sys Options:
- Set Number Tag: 000
- ID Scan/Search: ID Search (?)
- Set Delay Time: 2 secs
- Edit Fleet Map: Custom (?)
- Priority ID Scan: Off (?)
- Set Status Bit: [Yes] (was set to Ignore) (?)
- Set End Code: Analog (other options "analog+digital" and ignore) (?)
- Energency Alert: Alert Tone (off)
- Set ID Format: Decimal (or Hex)
- Rvw ID Srch L/O: Nothing Locked
- Clear All L/O IDs:
- Set Audio AGC: Analog (or Digital) (?)

Edit Site:
- Edit Name: Site 1 KSC
- Edit Quick Key: 1
- Edit Startup Key: 1
- Edit Band Plan: Custom
- Band Plan 1:
- Set Base Freq: Lower: 406.1 Upper: 410.8375 (?)
- Offset: 380 (?)
- Select Polarity: + Polarity (or '- Polarity') (?)
- Spacing: 12.50 khz (?)
- Set Frequencies: (see below for sites/frequencies)
- Set Modulation: Auto (or NFM, FM)
- Set Attenuator: Off (or On)
- Set Lockout: Unlocked (un-locked or lockout)
- Set Hold TIme: 0
- Set LocationInfo: Latitude, Latitude, Range and GPS Enable)
- P25 Waitime: 400 ms

Here is the information I found from the web on this system:

System Type: Motorola Type II SmartZone
System Voice: APCO-25 Common Air Interface Exclusive
^^
Does this mean the system is a full digital system, or a mixed
analog/digital system?

The websites both specify the band plan settings as:
Lower: 406.1, Upper: 410.8375, spacing: 12.5 and Offset: 380
Since the radio gives "800/900 Standard", "800 Splinter" and "Custom", I
selected "Custom" and entered the settings from the websites.

I understand. Under Program System, there is an option "Edit Group",
which is currently empty. Do I need to put anything in there, or will
the radio figure that out.

Thanks for the help!

A Personal opinion,,

That depends on where you live and what you monitor.

In many cases now, with the change to digital systems
for emergency services.
If you lived in our metro area,its really better to sit
it on a shelf and purchase a new digital scanner..
rather than put any cash into repairs, if needed

Not familiar with that model. but the first thing I
would check, would be the backup battery IF that model had
one. If it has one, & Its more than a year old, change it.

I know the older programmable scanners that I had
(both table & handhled models)
the battery getting old or low voltage would result in
the error message , and lost freqs/channels.

(got several old scanners that are pretty much useless
now, with the shift to digital. (both Rat-shack & Bearcat))

Using a digital now and NOT really pleased with the audio
quality at all. normal digital radios sound great,
but the scanner folks are not up to speed on the new stuff yet.
perhaps when this one wears out, they will have fixed that issue.

AH, be gentle,
he may want to keep it, like I keep one old analog

Thats one of the great things about the new breed of scanners
while older units will get the weather, the new one has the
SAME decoder built in, so once you set the codes for your area, you
don,t have to deal with weather alerts for the whole state..
I set the codes for our metro plus the closest surrounding counties.
and leave it on in SAME setting during possible rough weather.

A radio that still works is a potentially useful radio...provided, I suppose, that it's not a spark-gap transmitter. <grin>

I have a BCD396T, a BCT-8, and a PRO-94, all trunking scanners and of course the 396T is a digital trunking scanner.

Nevertheless, the bulk of my public safety monitoring is done on one of my two PRO-2045s, and all of my military airband listening is done on the other 2045.

I have three other conventional handhelds that get used for various special tasks such as marine VHF, utility companies, etc.

I even have an old rockbound Regency that I still use for monitoring a local ham repeater that retransmits the UHF downlink frequency for a couple of amateur satellites during each pass when this area is in the footprint. Makes it a lot easier to work guys through the sat when you don't have to track the bird to hear the downlink. :-)

But when an old analog scanner no longer works...hey, working models are practically a dime a dozen on E-Bay and at hamfests. I won't waste much time or

any money tryng to resurrect a dead one...that's time and money and can find much better uses for.

I vote against "hammer" though - I'd rather take it out to the back 40 with my .22 and use it for target practice!

I see that Mike Oxlong is playing god again, he seems to enjoy locking up a lot of threads. Now we will get this long thread from him stating blah blah.
After he reads this post. I will also probably be locked out as a member, oh well. This guy has to be put on a short leash and muzzled.

I recently bought a Uniden HomePatrol scanner and I love it. However, I don't get much aircraft on it. Actually, I don't get any, and I live right under approach and departure lanes for three major airports, LaGuardia, Kennedy and Westchester, NY. There's planes overhead constantly, and I'd love to hear the chatter from both the planes and terminals, towers etc. Unless I'm missing something on this HomePatrol, it's about useless for air traffic., Any suggestions for a scanner for aircraft, that won't break my wallet? Handheld or desktop, really doesn't matter. Thanks.

With so many systems going to digital, and a lot of people upgrading their
scanners, you should be able to pickup used A/C band sacnners fairly cheap.

Bearcat 2020 (20 channels)
Bearcat 220XLT (200 channels) handheld, BNC connector
Radio Shack Pro-2021 (200 channels)

among others.

NOW Some personal observations from years of scanner & radio use.
*** YOUR MILEAGE MAY VARY ***

since the aircraft radios are AM band, the range for a ground based
listener are not good without an good outside antenna. unless you are
fairly close to the tower, your not likely to hear the tower.

and since aircraft transmissions are usally very brief, the use of a
scanner in scan mode, makes it very hard to catch one.

best to find out which freqs are in use for your local airport. and set one
freq , and listen to only that one. say the
John F. Kennedy Approach/Departure 127.40000

That will give you an idea what is going on..
Then work from there.

trying blind to scan all the possible air band freqs will just prove
to be an excercise in frustration.

have you got the airband disabled(locked out) in your home patrol?

this radio covers the airband..... if you can't hear the planes on it
then you won't hear them on any radio

Check the user manual on how to enable/Disable(lockout/unlock) each service

To what has already been said upthread, I will add this: Also check that the squelch is set properly so that the signals can open the squelch. This detail often gets overlooked; on some scanners I've seen the AM sensitivity be a third of what it is on FM. For example, my PRO-2045s have a sensitity of about 0.5 microvolt on VHF-FM but need 1.5 microvolt on AM to get the same 20 dB S+N/N ratio for an AM signal in the same frequency range.

The other thing I can't emphasize enough: The antennas supplied with most scanners are better than nothing - but all too often, not all that much better than nothing, and some of them are absolute garbage. If the antenna's your problem, you can get a better antenna for less than it would cost to buy another scanner, even at a hamfest or garage sale - and that might still need a better antenna once you've purchased it.

For indoor/portable use, I like the Diamond RH77. I have four of these and they flat out rock! For an outdoor antenna, almost anything more sophisticated than a coat hanger outside will work better than anything inside, but for maximum frequency coverage in an omnidirectiona antenna it's tough to beat a discone.

Hope this helps..

I just read a review of that scanner in the new QST. Seems like it ought
to do everything you want. Can you look at the list of frequencies it is
scanning in the aviation band? You might want to go to a pilots' shop
in the area and get the latest FAA airport/facilities directory for your
area, which will list the tower and other frequencies for airports, and
also the approach/departure control and and center frequencies. Also
you pick up some of these by listening on the ones you already know about.
e.g. if you listen to control tower for departures, they will tell a pilot
to contact departure control on xxxx, and then if you listen on that
frequency you may hear them telling the aircraft to contact center on
xxxx. Also note that the last digit of the frequency is not mentioned,
so it could be zero or five. If the controller says 123.27 that is really
123.275.

Anyone know where I can go about getting the software for the Motorola CT250 without spending 400$ to program my radio once.

If there is an open source alternative I would be ecstatic, however, it appears that the HVN6053E software is my only option, any help would be appreciated.

Thanks,
Haysead

I am a recovering Windows victim. I have "hit or miss" results with that dongle on Linux. I am using an ancient Belden Palm Pilot Dock Adapter USB-to-serial, but the LEDs on it make radio noise. Not enough to disrupt comms, but it's there and it bugs me.

It is supposed to be PL-2303, but it doesn't work with the PL-2303
Prolific Download Drivers, but works with provided driver that is labeled
PL-2303 in Windows 98/XP.

I am looking for the MVT 7000 or 7100. The unit must be in good working condition . Most important: the rotary frequency change knob must operate. I use it t0 design SAW transmitters and it helps to plot the tolerance with RSSI as you swing that Frequency select knob. My unit finally died after 15 years and after buying a 'new' 2184 Radio shack triple trunking Scanner find myself disappointed to say the least. For my work the MVT was better. Please post if you have one! Thanks, MichaelPGS

If it's of any interest, I have an MVT-7200 sitting on the shelf in the basement. I don't think the packaging or manual survived the move from my original apartment, but it has belt clip, soft case (vinyl window is clouded and yellowish from age) and antenna. I could probably scrounge up some operating instructions too ... if this would work for you please let me know and I'll check that it still works.

I tried emailing you but your UseNet gateway does not provide a "real" emailable address to reply to.

Southwest was the best airline; now their planes are breaking (and that

I have a Uniden BC200XLT, a radio I bought new in the late '80s. It works fine and meets my needs, but the battery has died.

I'm looking for suggestions on where to get replacement batteries, either the whole slide-on package or a rebuild kit.

Thanks...

A couple of years ago I took my dead battery pack to my local

139. [ADMIN] Facebook gateway/update page for rec.radio.info now available

A Facebook gateway is now available for the rec.radio.info Usenet newsgroup.

On your Facebook account, the gateway provides links on your Facebook news feed to rec.radio.info articles that are available on Google Groups. There are also links on this page to the other two radio-related newsgroups that have similar Facebook pages, ba.broadcast.moderated and rec.radio.broadcasting.

Search for the following Facebook page:

rec.radio.info (Usenet Newsgroup)

All you have to do is "Like" this page to receive updates on Facebook. You can also suggest the page to your friends through the usual Facebook methods.

It should be noted that what appears on the Facebook page is links to Google Groups. You will still have to go to Google Groups (or to your regular newsreader) to see the actual articles. This is a notification feed only. Due to occasional delays with article Message-ID index updates on Google Groups, the links to Google Groups may not be immediately available. Still, it might be a useful way to introduce the newsgroups to those not familiar to Usenet by using technology that might be more familiar to them (Facebook). Instead of doing the sometimes hard work of convincing folks to sign up for news access, or to check Google Groups, all you have to do is invite them to the Facebook page.

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com, which is the default Followup-To address for this article.

If the tower is NOT of a height, to REQUIRE Lighting and Painting, then it is up to the owner to comply with any local Ordinances, and Private Contracts (HOA Covenants) that are in place on the land on which the tower is located.

Cell Towers, by in larger, are NOT of a height to REQUIRE Lighting, and Painting, because of their limited Cellular Coverage, similar to many Ham Radio Towers.

What does your question have to do with OS/2, amateur radio, CD radio,

Transmissions on an amateur frequency are only sent to other amateurs.

A pawn shop near me has one for sale.About $57.00.Somewhere around the middle of next month, the price goes down to about $47.00, according to the pawn shop sticker I saw on the scanner.It is a little hand held scanner, I didn't ask the sales clerk if I could look at it more closely, so I don't know exactly what model it is.Assuming it works OK, is it worth that much money?

palmdale restricted him to operating on vhf and uhf only and took
away his fcc-license authority to operate on hf. one of
palmdalesexcuses for this was for rf health reasons, the larger the
antenna the more rf radiation there is which is harming the residents
in palmdale, such as hf antennas, and the smaller the antenna , the
less rf radiation there is which is healthier for the residents n
palmdale., like vhf and uhf antennas, therefore he is restricted to
vhf and uhf antennas and can still paarticipate in a part of ham
radio.
d
well, accordng to the arrl, the fcc rf charts and rules show that
transmitting at 100 watts or less on hf is perfectly safe for
everyone and under the mpe limits,and transmitting at the same power
level on vhf and uhf with a small antenna is harmfull. and more than
the mpe
limits.
so by ruling the way they did, , palmdale has screwed
theirselves
over.
if he was transmitting at 75 watts on hf with a hf antenna on a
radio capable of only a 75 watte setting, perfectly safe for his nimby
neigh bors. they and the city of palmdale and the state
ofcalifornia ruled that he is not allowed to transmit on hf and is
only allowed to transmit on vhf and uhf despite what the fcc says. and
s only allowed to have a vhf uhf antenna. and if he is
transmitting at 75 watts on vhf 2 meters , his nimby neigh bors
are now getting more than the mpe limits of rf
radiation.

why pay the arrl to upgrade your license as the california state
ruling in the palmdale case has recently proved, it is a complete
waste of money to pay the arrl anything to upgrade your radio license
since local cities and states can take it away anytime despite what
the fcc says. you pay to upgrade to a general or extra then the local
city and local state takes it away by busting you back down to
technician class even though younever violated any fcc rules and
despite fcc rules saying no one except the fcc is allowed to force you
to involuntary surrenderr your fcc
license.
and if cities andd states can take away your general and extra class
radio license despite what the fcc says as has happened in the
palmdale case, then they can also take away your technician class
license and even the right to operate your cb radio no matter what the
fcc
says.
why is this ruling of cities and states prohi biting you from having
a general and extra class radio license despite the fcc granting
you a license to operate general and extra class being allowed to
stand.
whatever happened to the federal law trumps local city and state law
the radio opeators were so fond of quoting in the
past.

You don't pay the FCC unless you get a call of your own choosing (vanity).
You don't have to pay to renew your license on the ULS. You would have to
pay W5YI to do it foe you. You have to pay the current test fee to the VEC
unless you've got a VEC like the Laurel VEC that doesn't charge for tests.

The ARRL has nothing to do with license fees except to make recommendations.

These kinds of laws should be done at the state level and not the consumer level. IOW, the state should inform the manufacturers of the cars that if they want to market their products in the state, they must conform to the following regulations: (statement of regulations)

To expect the individual buyers of automobiles to get them equiped to the states regulations is a bit too much.....

Watts are important here. If you are talking 100 milliwatts or less, then you can transmit pretty near anywhere and at pretty near any frequency. These are the levels of garage door openers and cordless phones. They are only good for 100 yards or less. But most lawmakers can't tell a watt from a volt or an amp. They are technical minus people, or they would get a real job and actually contribute to the society instead of parasiting off of it.

Oregon outlaws using cellphone or any other electronic device while
driving unlessit is hands
free.
The law also says you are exempted if you hold an amateur radio
license or any other vald FCC license and are using a ham
radio.
So according to Oregon law, if you hold a FCC GMRS radio license and
are using a GMRS radio, you are in violation of the law since you are
not using a ham
radio.
and iff you hold a FCC-issued GMRS license and are using a ham radio
even though you are not FCC-licensed to do so, you are completely in
compliance with the law and completely legal according to Oregonn
law.
I thought that is a violation of federal law to transmit over a ham
radio when you are not FCC-licensed to do
so.
and what do all us federally legal cbers do. the federally legal c
bers do not have a license to show to the cops or courts lthough they
are federally licensed to
transmit.
and why is this state law and other state laws overruling federal law
if federal law trumps and overrules local and state laws like most
posters in this newsgoup said they do. The FCC rules say we
may transmit from anywhere the FCC has authority over
radio.
so either the FCC fraudently lied or else the FCC told the truth and
does not have authority over radio transmissions in Oregon and
California and Maryland.

If the law is taken literally, then yes, any state that bans "hand held
devices", would include CB radios.
But I believe most cops would not enforce that aspect of the law.

But would that law include hand held units that are not attached to the
vehicle? Some cops may see those as they see cell phones.

That's an argument that would have to be settled in a court of law.
True, the FCC authorizes the use of CB radio. But states, certainly can
restrict their use in a vehicle. That does not deny the use of them by any
means. You just can't yack while driving.

BTW lawmakers, take a good close look at some expensive ham radio equipment
for mobile use. What's that? You don't see that dial pad on the radio?
Guess what dude? That hammy can make phone calls with his radio just the
same as any cell phone.

Obviously you haven't studied for an ham radio license in the US.

Part 97.115b allows a third party to use a ham radio as long as a licensed control operator supervises. An legal scenario under FCC rules would be where the driver is using the radio and the passenger is a licensed amateur.

You'd be pretty hard pressed to find an actual working auto patch anymore.
There are none in Baltimore as the misfits ruined it for everybody.

Well that's boston for ya. It's screwed up in every respect.
In cincinnati, auto patch still thrives well because of the people that run
it.
although it is probably not used as much since cell phones are in wide use.

And when a ham radio operator (who has no better ability to drive than
anyone else) goes over the cliff because he/she was distracted by operating
his ham gear while driving, at least he wilol know, in those few seconds
before he dies, that he was well within the law.

It usually isn't the misfits who ruin that stuff. Its the authorities
inability to tell the difference between misfits and normal people. "they
are quick to throw everybody into the same "misfit bag".

Garage door openers probably operate at less than 1 milliwatt and
cordless phones at a few milliwatts.

Copi8ed from the internet:

Technical properties
Some DECT properties:[citation needed]

a.. Audio codec: G.726, G.711, G.722 (wideband), G.729.1 (wideband) and MPEG-4 ER LD AAC (wideband and super-wideband)
b.. Net bit rate: 32 kbit/s
c.. Frequency: 1880 MHz-1900 MHz in Europe, 1900 MHz-1920 MHz in China,?1893 MHz-1906 MHz in Japan, 1910 MHz-1930 MHz in Latin America and 1920 MHz-1930 MHz in the US and Canada, US DECT and DECT 6 products may NOT be used in the UK as they cause and suffer interference to the UK 3G cellular networks with unlicensed use of such products being prohibited by UK agencies. As DECT and DECT 6.0 do not operate in the 2.4 GHz ISM band, they are not subject to the interference arising in this band from its use by 802.11b and 802.11g WiFi, and 2.4 GHz cordless phones.
d.. Carriers: 10 (1,728 kHz spacing) in Europe, 5 (1,728 kHz spacing) in the US
e.. Time slots: 2 x 12 (up and down stream)
f.. Channel allocation: dynamic
g.. Average transmission power: 10 mW (250 mW peak) in Europe, 4 mW (100 mW peak) in the US
I was talking about the maximum power allowed by law for such devices, and not the minimum that some cleaver manufacturers have been able to achieve. A lot depends on the frequency and the available antenna swystem.

Pretty soon everything will be illegal.
There were over 44,000 new Laws and Regulations instituted, in 2009.
Most were restrictions on Citizens. Note I didn't say voted in.
Most Citizens would have not voted for most of them.
How many more were passed last year?
The only rights you will have are the privileges you can afford from Big
Business.

How about that girl that they headlined on, "60 Minutes" that can drive without any arms....She uses her feet for everything... I guess she would be legal using her cell phone while driving. Right? Cause she does everything, "hands free".

In a further effort to further crackdown on perfectly legal 2 way radio operators, Vancouver, Montreal, and other Canadian cities have passed laws outlawing leaving valuable itemms like your ham radio or cb radio in plain sight in your vehicle. If you are in a restaurant or store and a cop or mountie looks inside your vehicles windows and sees your valuable ham radio or valuable cb radio in the usual place, under the dash, or amywhere at all where it is visi,ble instead of hidden where no one can see it, you will get ticketed and fined and prison time. Since you broke the law by leaving a valuable item or items in plain sight inside your
vehicle.
The Crazy Canuck Canadians were not satisfied with only outlawing the use of hand-held microphones Now they also outlawed simplay having the radios visible in the ONLY NORMAL spot for a 2 way radio and outlawed having them visiIbe anywhere in the
vehicle.
and then as usual, Kooky California will follow , and then other American cities and states will follow, also outlawing having any 2 way radios visible in your
vehicle .
The reason the authorities gave for why they passed this law allowing them to fine ordinary citizens for doing so is to prevent theft of valuable items in vehicles by theieves and
criminals.
however, we all know the real reason for this ridiculous law is so they can ticket and fine more people to get more money for theirselves. So the Canadian cops and Canadan Royal Mounties and Canadian governments are the real
thieves.

read it again, although they did not outlaw ham radio , they,
Delaware, outlawed even having a cb radio in vehicles at all unless
it is in a commercial vehicle If a cb radio is in a private non-
commercial passenger vehicle, it is illegal accordin to the new
Delaware law, and you are violating the law, according to the new
Delaware
law
and they wold have outlawed ham radios in them also if they could have
However, they could not since the Fcc rules say they can
not.
The Delaware law, as written and passed, outlaws even having a cb
radio in a non-commercial vehicle even if it is mounted connected to
the vehicle as usual. The law in that state says a cb radio is only
legal in s vehicle if it is mounted in a commercial vehicle . non-
commercial passenger vehicles are NOT exempt. Delaware has also made
driving more dangerous with this law. I have driven through cities
where the cities were broadcasting one-way traddic reports and road
conditions on cb channel 19 which made my drive and other drivers
drives safer as we kknew wgich roads they were doing constrution work
on and to take and not take among other things. Now, if I have to
travel to Delaware, my only choices are to leave a radio in my car and
get fined or to spend time taking the radio out and travel through the
other heavy-traddic cities without being able to hear the traffic
safety reports those cities provide on cb channel 19 which makes the

drive MORE dangerous and causes MORE accidents ,since regular am and fm broadcast stations no longer provide any such services since media consolidation, Dumb Delaware has made the roads more dangerous and increased the likelyhood of traffic accidents,

This is the greatest law passed in the history of any legal system, anywhere. I for one applaud Canada's approach to the issue of theft of personal property from vehicles, and fully support and endorse any efforts to bring such laws into effect on a global scale.

You, sir, clearly do not wish to reap the benefits of such forward-thinking legislation. Philistine.

Jest another step in the gradual process of making the victom responsible for the crime. Liberals just love to do that.

I see no reason why a microphone couldn't just be another cell phone ap. the CB unit (or other piece of ham gear) could be completely hidden, and your cell phone could be the microphone that keys and feeds it.

Right. Soon, it will be against the law for good citizens to wander about freely where criminals could attack and mug them after dark. Everyone will have to report into their padded cells one hour before sundown every night, so they won't tempt the poor, desperate muggers, thereby forceing them to break the law.

Don't believe there is need to be concerned. Can't find a single
matching link or post.
Canadian has so many regulations, on everything, it appears to be
straight jacketing their Citizens.
The US put over 44,000 new regulations and laws on the books, in 2009.
One State passed over 135 new regulations, in two or three days last
week. Pretty soon you will need a permit, or pay a fee, tax, or license,
for what little leeway or freedom is allowed.

To some posters, anyone who disagrees with them are "trolls". Especially if
they can't out-argue them with simple logic. They are quick to scream,
"troll", and "gun nut" and or anything other than formulating a reasonable

logical argument for their own point of view.

Yes. Unfortunately, the framers of our constitution didn't forsee the tax mania that was going to come about during the following 200 years. Today, the federal and state governments are forcing liberty into a huge black money hole by using the tax laws to control our morality and anything else they want to control. Don't want people to drink Coca Cola?
Well, just tax the living hell out of it. Does the soldier on the front lines fire an extra round or two for the people who drink Coke? No? Well what does that matter? We don't have to obey any laws about taxation. It wasn't mentioned in the constitution, so we can tax whomever and whatever we please, for no other purpose other than to make money.

It's the nature of nature that those who are big and powerful oppress those who are small, weak, and cowardly. It has nothing to do with the constitution. If mice don't want to get eaten by lions, they need to gang up on the lion and force it to do their bidding. And if that doesn't work, they need to run and hide.

To prove it has nothing to do with the constitution, just look at all the "unfair" taxes in countries that don't have constitutions.

Look at all the unfair taxes we have here, even though we do have a
constitution. 30 years ago I needed some ethyl alcohol. I don't drink it,
but I used it to clean my trumpet with. I had to buy 4 gallons of it at $40
a gallon. the vender told me that the government took 50% of that in taxes.
Normally, it would only cost me $20 a gallon. So, I had to find 3 other guys
who would go in with me on the purchase, (most of them would drink it) and
buy like 10x as much as I needed. that's our government in action for you.
(And for all you liberals out there who would be quick to tell me to use
isopropyl alcohol, it makes me sick, so that's why I needed ethyl.)

Think of the implications that the first example you thought of was 30
years ago. If it was a big problem, wouldn't you have thought of a more
recent example first?

Recently I had to get gas for my lawnmower. It cost me $8+ to fill my
container, including highway tax etc. I suppose I should mow the highway.

Yes. I am 75, so most of my lifetime examples come from a number of years ago. but I also keep up on the news, so I know that our tax laws haven't gotten any better. The tendency of the liberals to use taxes to control the morality of the people has gotten worse over the years. Also, they get money anywhere it exists whether the people they steal it from deserve the treatment or not. If you have money, then the liberals feel that you deserve to have to give it up. The fact that you may have spent years doing without and working your fanny off to get it don't make no never mind to them. They think everybody who rides through Sherwood Forest on a fine horse must be the Sheriff of Nottingham.....:^)

A minor point but one I understand. We had nothing and still have most
of it.
After we are both retired we managed to buy a real performance automobile.
Had to pay a fine or sin tax, of 2,800.00, because it didn't get 25 or
whatever miles per gallon. Never mind that those responsible, for the
attitude and who's daily commute consumes the equivalent, of a large
SUVs fuel, each way, for a month, or the limousines etc that they are
driven in daily getting maybe 12 mpg.

They charge a healthy tax on gasoline. That should take care of it. The worse your mileage, the more gasoline you have to buy, and the more tax you pay. Why would the liberals want any more than this? Back East, they have toll roads. I can't think of anything more stupid than having to brake down from speed to a stop, pay a toll, and then re-accelerate back up to speed. How many gallons of gasoline a year are wasted doing this?

In most cases any audio recorded with a video utilizes the microphone built into the camera or another microphone under the control of the camera operator or his associates. The sound is already available to eavesdropping by the unaided human ear. Like a phone tap, a scanner uses a microphone owned or controlled by the organization/person operating the wireless transmitter. In most circumstances other people wouldn't be able to overhear the speech of dispatchers or mobile emergency personnel without the aid of agency owned electronic equipment.

The issue will gradually become moot anyway as agencies transition to the use of cell phones, in car computer terminals and other encrypted radios

Caution MUST be used wording laws/regulations concerning monitoring and recording people indoors. People and invited guests/customers deserve privacy in areas where they can be expected to bathe, change clothes or use toilets/urinals. Privacy regulations shouldn't protect persons in the act of abusing people or pets in their care or in the process of committing burglary or other access not authorized by those legally occupying the premises (including landlords who don't provide adequate prior notice).

Rather unfinished, wouldn't you say? The label "Form1" is clearly visible on the form, and "Tab6" and "Tab7" are clearly visible on the tabs. And what makes your software "shortwave" anyway?

I have found a modification to speed up the scan rate on the pro 2021 however it is a bit confusing.It says to cut the leads on resistor R147 and solder in a 15k ohm resistor. Then at the bottom it says you are not replacing the R147 resistor a 39k ohm resistor i think. You are adding 15k ohms to the existing resistor,so my question is are you cutting the leads to one side of the resistor and adding the 15k ohm resistor in-line and if so exactly how would you do this. ex. color codes on resistor placed the same direction? Any other modifications other than opening up frequencies by cutting R44 and R45 I would like to know about them. One more thing anyone may be able to aswer.Why is it that in these seemingly catagorized groups there is sex stuff in everyone.Im somewhat new to groups and I just dont get it.Thank you in advance for your time.

several states have now outlawed using ham radio while walking. this
is part of their ban on ALL electronic devices while walking as a
result of the lady who fell into a fountain while walking in a mall.
however, instead of outlawing only texting while walking, the new laws
state using ANY electronic device while walking is against the law and
violators will get fined over two hundred dollars for doing such. And
unlike the driving laws, there are NO exceptions for ham radio or cbl
radio in these states laws against using ANY and ALL electronic
devices while walking.

I'd like to see the text of such legal codes.
What states and where did you get this story?

Once again, you show us what ignorant asshole you are.
Post the proof, asshole. Post a link to an actual state law.

Apparently, several states have proposed the banning of certain devices
while crossing a street. But most of those are just proposals. The first
one, in arkansas, was dropped because the guy said there wasn't enough
backing.

It is ridiculous on the face of it. If your wristwatch is electronic, you could get a $200 fine for checking the time while walking.... Or, how about listening to a radio while jogging? Or using a heart rate monitor while jogging?

It all boils down to people in the legislature who have nothing new to
write laws on. So they dream this shit up because of one person got injured
from it.

A couple of years ago Ohio passed a real doozie.
If you own a dog in ohio, you have to set up an escrow account for the dog.

Ohio law: No train may pass until the other has.

I've read that many states are now outlawing walking while chewing gum.
This will directly effect Radioguy.
Next up? The new Wrigley's gum packages will soon come with a warning label,
similar to those on cigarette packages that state, "Warning. Walking and
Chewing Gum At The Same Time Can Cause Injury or Death."

The violation of this law is a simple infraction, but can result in a $25.00
fine and the confiscation of the gum.

Yes, but it all illustrates a basic problem with our government. since the legislature is there to, "Paqss laws", they are not considered to be doing anything unless laws are passed. So, they busy themselves passing laws whether those laws are needed or not. In fact, there are way too many laws on the books now, and what the legislature should be doing is UN- passing laws, or getting rid of them. We need a law that says the legislature can't pass any law without first removing one of equal length first. And, they should get as many brownie points for removing a law as they do for passing

a new one.

That's right. Walking and listening at the same time is forbidden.... As a matter of fact, listening in general might as well be forbidden. It has become a lost art.....

Ya know, I think I few western states still have on their books, that gentlemen must check their guns upon entering a bar. Or some such silly thing.
You might even find a law in a state that requires a vehicle being propelled other than by horses, to have an escort on foot waving a warning flag.

Well, these kinds of laws are quaint, and like artificts in a museum, do little harm. The laws I am talking about are modern concoctions that juswt restrict peoples liberties for no real reason, like the "cant walk with an electronic device" law. Every time some new law is passed, someone's freedom is restricted in some way. It the law also protects the freedoms of someone else, then perhaps it is a good thing. But when the law doeswn't protect anyones rights from transgressions by someone else, then I seriously question its constitutionality. As a libertarian, I am generally against any law that restricts one persons rights without protecdting those of someone else. The motorcycle helmit law is a good example of this. If I get into an accident with you, you are better off if I am not wearing a helmit. So whose rights does such a law protect? Of what business is it of society to be protecting my head? My head is my own business. If I want to break it, well whose going to be hurt by that? There will just be a little more air and water for the rest of the society. So, in general, I resent laws that protect me, or purport to protect me from myself and my own foolishness. That's not what I want my legislature to be doing. The ultimate, and obvious endpoint of such laws is to put all of us in padded cells for, "our own protection". That's why I call these kinds of laws, "Padded cell laws". IOW, I think we should all have the right to harm ourselves, as long as in so doing, we don't harm anyone else.

5-30 seconds in the microwave depending on the chip in question and how combustible the clothing you just purchased is. Problem solved.

not only swedish childrens BOOKS , also American childrens tv
shows.
When I applied for a credit card, and clicked on the link for picking
the picture I want on the credit card, and saw their rules, I found
out the credit card company will not allow pictures from the childrens
tv series H.R. Pufnstuf, because the credit card company considers it
it a death symbol, too violent, and even the name is disallowed as it
is conidered by the credit card company as a reference to illegal
drugs and promoting illegal drugs, which is disallowed on their credit
cards. Even when told it is a perfectly legal kids tv show, they
disallow it as it is considered controversial since the name can be
interpreted as referring to and promoting illegal druga, and nothing
controversial is allowed on their credit cards eirther. They are
afraid they will get arrested and imprisoned from some nimby worker at
some other company taking them to court over those for offensive
pictures and promoting illegal drugs if they allow anyone to have
those images on their credit
cards.
and you know what In this day and age, they are correct
that the nimbys will try to take them to court and imprison them for
that if they allow it. no matter that it is a perfectly legal kids tv
shows. after all, the nimbys are already trying to force all the
people living in non-hoa non-CC&r houses on non-hoa non-C&R land into
suburgatory. And the terrible part is so far, they have been winning,
even in court. I have already seen several such non-hoa non-CC&R
properties get taken over by CC&R-laden hoas without the permission of
the property owners-homeowners. land and homes which were non-hoa
non-CC&R when purchased now have CC&Rs requiring hoas against the
will of the purchasers who purchased them to get away from the
fricking horrible hoas. This kind of takeover of non-hoa non-CC&R
land by CC&R-laden hoas should NOTbe happening in America, yet it is,
even though the U.S. constitution expressly forbids it from
happening.
As for the credit card, no matter. I wasnt going to use any of the
images from H.R. Pufnstuf anyway. In this day and age, the putrid
police all over the country would use that as both probable cause and
evidence of being involved in illegal drug activities and selling

illegal drugs, even though I have done no such thing and have never done any such thing, and never will. and it is only pictures from an old Saturday morning childrens tv
series.

In California, Grand Theft, a felony, is defined in section 487 of the Penal
Code, as:
"(a) When the money, labor, or real or personal property taken is
of a value exceeding nine hundred fifty dollars ($950), except as
provided in subdivision (b).
(b) Notwithstanding subdivision (a), grand theft is committed in
any of the following cases:
(1) (A) When domestic fowls, avocados, olives, citrus or deciduous
fruits, other fruits, vegetables, nuts, artichokes, or other farm
crops are taken of a value exceeding two hundred fifty dollars
($250)."
Until amended, it used to spell out a number of avocados, etc., regardless
of their value.
Why the special treatment for agriculture? The agriculture lobby.

Shouldn't we also ban using such devices while brushing your teeth? You
could poke your eye out with that electric toothbrush if you got distracted
by a cellphone call. And what about while looking out the window? You could
fall over and kill yourself. While eating? Imagine the damage a fork could
do! Especially if you were tapping your feet to the beat of music on your
Ipod. And what about while engaging in marital activities in the bedroom?
Thank God for our state legislatures. They have their work cut out for them.
Perhaps we should kick this up to the federal level, since it's common
across the states. I wonder how the rest of the world has handled these
important issues.

266. Canada outlaws hands-free ham radio

Not satisfied with just outlawing cb and ham radios which use hand-
held microphones, Canada has now outlawed hands-free ham radio by
hams, and hands-free cb by cbers, yet still allows two-way radio use
by taxi cab drivers, school-bus drivers, and businesses, police,
etcetera even though all those people have MUCH LESS training in
operating a two-way radio than hams do.

such as almost none, if not none, although it is usually none.

even low-class redneck cbers know more about how to properly use a
radio then those people do.

yet the only ones allowed to use it are the ones with little or no
training while the ones not allowed to use it ae the ones with the
proper training in how to use it.

If the police had the proper training, then they would not be
arresting people under phony radio laws which they claim is the actual
law.

so that alone is proof the police do not have the proper training in
howw to properly use a two-way radio since they do not even know the
radio laws that they are trying to enforce, and therefore should also
be prohibited from using a two-way mobile radio if the cbers and hams,
which have the actual training as it is required to get their ham
raadio license also are not allowed to operate their two-way radios
mobile.

The names and call letters have been changed to protect the innocent.

Once upon a time, there was a ham radio operator who moved into a homeowners association which had the very very very vague rule "NO ham radio transmissions allowed on homeowners association property".

Originally, the ham thought this was a very very very specific rule which allowed him to transmit from ham radios off of homeowner association property while he was physically off of homeowners association property.

So he moved into the homeowners association and unlike certain other hams which hide antennas on homeowners association property in violation of the homeowners rules and the contract they signed, this ham actually obeyed the homeowners association rule and transmitted ham radio only when he was physically off of homeowners property using radios, and repeaters, and irlp and echolink..

However, he soon found out it was a very very very vage rule when the big bad homeowners association foreclosed his house on him for violating the rule and claimed that it was a very very very specific rule which prohibits him from making ham radio transmissions even whie he is off of homeowners property and using ham radios off of homeowners property while he is physically off homeowners association property.

It started because while he was making a ham radio transmission off of homeowner property while he was physically off of homeowners property, another homeowner in the association heard the ham radio transmission on his own scanner (no the hams scanner since he didn't have one other than the one he had off of homeowner association property, such as at his parents' house) and complained to the homeowners association about it.

Then the big bad homeowners association stated he broke the rule and fined him. The ham refused to pay the fine, stating that he never ever broke the rule and only made ham radio transmissions when he was physically off of the property and never ever even had a ham radio on homeowners asociation property at all.

Then the ham quoted the rule to the homeowners association as proof he never ever broke the rule.

Then the big bad homeowners association replied back with that it did not matter if he was on homeowners association property or not, that even though he was off of homeowners association property when he ade

the ham radio transmissions, since the ham radio transmission could be heard on homeowners property , that it "was indeed a ham radio transmission on homeowners association property and in violation of the homeowners association rule of "NO ham radio transmissions allowed on homeowners association property""

and the fine stands and foreclosure stands if he eefused to pay the fine.

The ham refused to pay the fine, and wanted to take it to court. However, he could not afford to take it to court.

The big bad homeowners association decided to take it to court to collect the fine from him he refused to pay.

The big bad homeowners association then payed off all the lawyers and judge including the ham's own court-appointed lawyer.

So the judge wrongly ruled in the homeowners association and against the ham, since he and the lawyers were getting kickbacks from the homeowners association.

The judgee wrongly ruled that the correct interpretation of "NO ham radio transmissions allowed on homeowners association property" was a very very very specific rule which meant that the ham was indeed in violation of the rule and contract he signed even though he was physically off of homeowners association property when transmitting because since the tranmission could be heard on homeowners association property, and therefore the ham radio transmission was made on homeowners association property in violation of the homeowners rule and contract th ham signed, even though the transmissions were made from off of homeowners association property.

Plus had to pay court costs which he could not afford for losing the case.

Angered and miffed by this, the ham wanted to appeal the case, but could not afford the $1,500 application fee the appeals court required just to file an appeal (not counting all the court costs afterwards), the ham decied to get revenge against the homeowners association.

As revenge, the ham gathered some of his ham radio buddies, such as NO44TXU, NO4DWS, NO4STU, NO4DFG, NO4SWQ, etcetera and had them all go onto the homeowners asociation property and start transmitting on their ham radios while physically on homeowners association property..

This angered and miffed the homeowners association who tried to gget them to stop transmitting by saying it is a violation of the homeowners association rules.

The hams replied that they are not bound by the homeowners association rules since they never ever signed a contract with the homeowners association.

Then the big bad homeowners association tried to claim they were trespassing.

Then the hams replied they were not trespassing since they were gusts of the ham who got fined and lived on homeowners association property and were just visiting.

Then the big bad homeowners association tried claiming since they were guests of the ham who got fined and lives in the hoa building and are visiting him, that they too are bound by the homeowners rules even though they never signed any contract with the homeowners association at all and are in violation of the rules and will be sued if they refuse to comply with the rules to stp transmitting ham radio on homeowners association property.

Then the hams replied that even if the ham who got fined was in violation of the homeowners association rules, that the rest of them are not in violation because unlike the ham who got fined and foreclosed on, all their call letters start with the letters NO and the homeowners association rules plainly state "NO ham radio transmissions allowed on homeowners association property"

Not quite.
The Ontario law is requiring users of various devices to be "hands free" by
2012.
Basically, no mic in the hand.

It is not all of Canada, just Ontario.

Another dumb, unenforceable liberal law. How can they possible know whether you are using a hands free transceiver or not? You are driving along with both hands on the wheel and talking..... For all they know you are talking to a passenger, or singing along with the music on your car radio. And why would it be any more dangerous than doing either one of those two things?

I don't know if it's still that way, but back in the 70's, if you even
wanted to have a car radio in your car, you had to apply for a special
permit at the DMV, and they would levy a tax and stamp your registration
with the approval.

Where do you come up with this shit?
You don't say in which state this happened.
Furthermore, no HOA anywhere has the authority to enforce it's rules while
off it's defined property or on public roads.

Can you at least identify the county court this happened in?

Ach... I thought I had mentioned the state. It was Wyoming, and they
certainly did have such a law. I remember the headache when I tried to
register my first car there. I ended up using a pocket transistor radio on

Check into the FCC rules (assuming this is in the USA) as while it's been a
long time if memory serves the FCC preempts HOA rules.

Sounds more like a cash strapped city law than a state law.

There was an unwritten "law" that said red cars belonged to the fire dept.

Yeah.... That makes a lot of sense. Pay a tax for the privelege of killing yourself or someone else in a car accident.... but that should tell you what its all about.. Money. If the government sees some way to get some extra money from any of its citizens, they'll jump on it. They don't need any excuse. They just collect money for the same reason Hillary climbed Everest.... "Just because its there".

My sister used to live in "Sun City West". A Dell Webb community in Phoenix AZ, and she said that a neighbor couldn't persue his Ham Radio Hobby, because the neighbors complained about the antenna array on his roof.

There is probably some medical term for, "Fear of new devices". But for sure

I don't understand. Was the transmitter located in the homeowners house, so he could transmit by telephone? IOW, did he telephone his own house and talk over his transmitter from some remote location? If so, then he certainly broke the associations rules, since obviously it was the transmitter power they were bitching about and not the physical location of the DJ. Its kind of like you calling a radio station and talking over the air via your telephone. You could call from anywhere, but the stations power will still be there to amplify and transmit your voice with several kilowatts to an audience.

I can believe it. There have been many dumb laws passed. Some of them have been thrown out by the higher courts, either 'state or federal. Like the guy back in the 60's who wanted to start a cable TV business in southern California. Every movie theatre had a petition in their lobbys to prevent him from doing it. and hunderwds of thousands of movie goers signed it. Not only that, but the stupid
California voters voted for it! Of course, the California Supreme Court threw it out. (His cable business didn't take away anyone's rights. If he came to your door and asked you if you wanted him to deliver a cable signal to your house, all you had to do was say, "No", and slam the door in his face. Ande, if your neighbor had one delivered to his living room, You wouldn't even know it, so it wouldn't hurt you in the least) But millions of California voters pulled the lever on "no" for that poor guy, and it cost him a bundle to fight it to the state supreme court..... Go figure.....
People haven't a clue as to what the Constitution is all about. And by, "people" I also mean our legislaters....

I have written up Quick Reference cards for the XT scanners that help
you operate the scanners once you get them programmed.

http://www.scannermaster.com/Manuals_s/500.htm&Click=64337?searching=Y&sort=1&cat=500&show
=20&page=1

They have all the key presses for entering and using the various modes
of the scanners on a wallet size 5-fold laminated card so you can take
them anywhere.

Great for trying new modes less used, they allow you to easily use all
of the features of the scanners "on the fly" without having to break
out the manual to figure out how to save a TGID, go to a channel
number tag, change center frequency in Bandscope Mode, etc.

They are the perfect companion to the Easier to Read manual also
available at Scannermaster.

That rule is not vague.

You were right, provided that your words: "transmit from ham radios off
of homeowners association property" mean: "transmit from ham radios
WHICH ARE off of homeowners association property."

I assume you mean that those radios and other stuff were all off of HOA
property.

I hereby request that all state legislators in your state pass a law
making it a misdemeanor for you to use the word "very" ever again.

If someone like me wrote the HOA agreement, it would have said (in more careful legal language) that all fines must be paid without setoff and regardless of any defense or proceeding to determine the validity of the assessment, and that the fine will be refunded if the member wins a protest with the HOA Protest Committee or wins a judicial determination that the assessment was invalid. If that clause is in the HOA agreement, you violated that rule regardless of whether you violated the radio rule.

If the HOA really said that, that was dumb. But that doesn't mean much. Either the non-vague rule was violated by a transmission from a transmitter on HOA property or it was not, and the subsequent dumbness of the HOA adds nothing and subtracts nothing.

Prove it. I'll believe it when you show me the order which says that or
a transcript in which the judge said it. Until then, I will believe
that the court decided that your transmitter was on HOA property when
the transmission occurred. That decision would be correct if the
transmitter was on HOA property at the time, regardless of where you
were standing. And of course, that decision was wrong if you did not
have the transmitter on HOA property at the time. An erroneous judgment
can be made - that's believable - somebody lied and the court believed
it. That's what appeals are for.

Useless, but harmless.

Just shows how dumb HOAs can be. It would have been more fun to stand
outside and watch the parade until the hams figured out they were
wasting gasoline and missing a baseball game on TV while accomplishing
nothing.

Now that's funny. And clever. And useless, of course, since there was no trespassing and no violation of the agreement and no fine assessed against them and no court proceeding contemplated. Just more harmless fun.

Depends on the state. Texas has had examples of all sorts of game on the
part of the HOA.

They might be able to begin the procedings. But as soon as that happens,
the mortage holder takes over.
Who do you make your mortage payments to? The holder or the HOA?
The holder has priority over the HOA.

driving increases the risk of fatal accidents by 2300%. It estimated
that drivers using cell phones in any manner failed to see up to 50

Marvyn Richmond, 49, was so engrossed in a conversation with his mother that he failed to notice traffic ahead of him had come to a standstill, and ploughed into the back of the queue, killing Michael Buston, a passenger in a van.

Relatives of Mr Buston and road safety charities called for an outright ban on making phone calls whilst driving, which makes drivers four times more likely to have an accident, even if they are using a hands-free kit.

Mr Buston's father-in-law, Peter Long, whose son was badly hurt in the crash in March last year, said: "The use of hands-free phones should be stopped. Whether it's hands-free or not, it's still a distraction to any driver.

"What happened was totally avoidable. At the end of the day this man has ruined many lives, all because he was using his mobile while driving."

Richmond was jailed for four and a half years after being convicted at Lincoln Crown Court of causing death by dangerous driving.

Q. What are the sources of driver distraction?

A. There are many distractions in everyday driving. Events and activities inside and outside the vehicle can cause driver distraction. Many of these have been recorded in the Crashworthiness Data System maintained by the U.S. National Highway Traffic Safety Administration (NHTSA) and include:

Something taking place alongside the roadway
An unexpected noise
Operating the radio, CD, or cassette player
Adjusting the climate or operational controls
Using other devices in the vehicle (navigational instruments, business tools, cellular telephones)
Eating, drinking and smoking
Other distractions while driving include personal grooming, conversations with passengers, disciplining or tending to children, reading or writing.

Back to top

Q. What are the consequences of driving while distracted?

A. Distracted drivers react more slowly to sudden traffic conditions or events, such as a car stopping to make a turn, or pulling out from

a side road. They fail more often to recognize potential hazards such as pedestrians, bicycles or debris in the road. They decrease their "margin of safety" leading them to take risks that they might not otherwise take, such as turning left in front of oncoming traffic.

When a driver's attention is drawn away from the road and the surrounding environment, the result could be a delayed reaction to a hazard, or possibly a failure to detect it at all. All of these are common factors associated with vehicle crashes. Driver focus is critical to anticipating and avoiding collisions.

One of the earlier studies on distracted driving, released by Transport Canada's Ergonomics Division, 'The Impact of Cognitive Distraction on Driver Visual Behaviour and Vehicle Control' in February 2002 (Harbluk and Noy) found that performing a demanding cognitive task while driving produced changes in the drivers' visual behaviour, vehicle control (as indicated by braking behaviour), and subjective assessments of workload, safety, and distraction.

A more recent study by the U.S. National Highway Traffic Safety Administration (NHTSA) released in April 2006 concluded that driver age, experience, daytime sleepiness ratings and personality can make significant differences in a driver's involvement in crashes and near-crashes due to distractions.

Back to top

Q. How many collisions are caused by distracted drivers?

A. Driver distraction is cited as one of the most common contributors to traffic crashes but the numbers vary depending on the study. According to a 2006 study published by the U.S. National Highway Traffic Safety Administration (NHTSA) the various forms of driver distraction are estimated to contribute in 8 out of every 10 crashes (NHTSA, April 2006). This figure translates into almost 4 million crashes per year. Estimates of a similar magnitude have been cited in other reports (NHTSA, 1997, Treat et al. 1979).

Next, they are going to realize that talking on a hands free cell phone
